Main objective

The main objective of the Cornerstone Direct Growth portfolios is to provide a return in excess of inflation over an agreed term. The 'Direct Growth 5' portfolio aims to achieve a total return above inflation with high risk. The portfolio will invest in a combination of direct securities and collective investments across a wide range of asset classes.

Risk profile

The Cornerstone Direct Growth 5 portfolio targets a high risk and return and is designed for investors who would be able to tolerate a loss of up to 25% in one year but understand and accept that this could be more in extreme market circumstances.

Investment policy

The Cornerstone Direct Growth 5 multi asset portfolio (MAP) will be invested in a range of investments that meet the risk and return profile of the chosen MAP portfolio. The model may hold, but is not limited to, listed securities or any collective investment schemes available via the private client platform. Holdings may include, Sterling cash and other currencies, OEICs, unit trusts, ETFs (an ETF is typically a fund that tracks an index but can be traded like a stock), hedge strategies, investment trusts and other investments on the private client platform.

Investment approach

We aim to meet our clients' investment objectives by producing long term real returns through active investment management. Our investment process is focused and disciplined.

Long term strategic asset allocation

The first stage of our process is statistical analysis of the long-term returns of asset classes, their risk measures and their correlations. This analysis enables us to produce a number of optimal portfolios that offer the highest expected return within the risk parameters established by Cornerstone Asset Management.

Economic research and tactical asset allocation

We research the global macro-economic environment using a number of key indicators. This process drives our tactical asset allocation decisions.

Changes to asset allocation

Investment Selection

We aim to add value through asset selection, both through direct investment and collectives (active and passive). We blend a robust bottom up process with our top down view of the global economy.

We believe that investment time horizon is the key market inefficiency and as a result we focus on investing with the long-term in mind and utilise macroeconomic themes in constructing the portfolio.

As a result of our deep resources we are able to research a wide opportunity set of investments while minimising the risk through thorough on-going research and active portfolio management.

Important Information

Clients are advised that the value of investments can go down as well as up. Any past performance or yields quoted should not be considered reliable indicators of future returns.

CG Wealth Planning Limited (CGWPL) has been appointed by Cornerstone to manage the Direct Growth MAPs under the terms of a delegation agreement. Your professional advisor is not responsible for decisions as to which securities and other investment products should be purchased and sold in order to replicate the model portfolio.
